

Implantica announces the payment of share rewards based on the AGM approved share-based incentive program as a directed share issue of own shares of the company without consideration

Implantica AG (publ.), a medtech company at the forefront of introducing advanced technology into the body, announces that on 23 December 2024 the company executed a directed share issue without payment to service parts of the equity incentive program for key employees.

A total of 100'000 new SDRS has been created representing a 0.2 % increase in the total number of SDRs. The total number of outstanding SDRs has increased to 58'211'537 post issuance from 58'111'537 pre issuance.

The Annual General Meeting held on 10 May 2022 authorized the Board of Directors to execute a Long-Term Incentive Plan under which senior executives and selected key employees are rewarded share-based incentives.

About Implantica

Implantica is a medtech group dedicated to bringing advanced technology into the body. Implantica's lead product, RefluxStop™, is a CE-marked implant for the prevention of gastroesophageal reflux that will potentially create a paradigm shift in anti-reflux treatment as supported by successful clinical trial results. Implantica also focuses on eHealth inside the body and has developed a broad, patent protected, product pipeline based partly on two platform technologies: an eHealth platform designed to monitor a broad range of health parameters, control treatment from inside the body and communicate to the caregiver on distance and a wireless energizing platform designed to power remote-controlled implants wirelessly through intact skin. Implantica is listed on Nasdaq First North Premier Growth Market (ticker: IMP A SDB). Visit www.implantica.com for further information.

About RefluxStop™

RefluxStop™ is a new innovative treatment that has the potential to spur a paradigm shift in anti-reflux surgery. It's unique mechanism of action differentiates it from standard of care and current surgical solutions. Longer established surgical options for GORD involve encircling the food passageway to support the lower oesophageal sphincter's closing mechanism and are commonly associated with side effects such as swallowing difficulties, pain when swallowing and inability to belch and/or vomit.

In contrast, the RefluxStop™ device treats the cause of acid reflux without encircling and putting pressure on the food passageway. It restores and maintains the lower oesophageal sphincter in its original, natural position.

The RefluxStop™ mechanism of action is focused on reconstructing all three components of the anti-reflux barrier, that if compromised could possibly result in acid reflux. It restores and supports the natural anatomical physiology of the body allowing the body to itself solve the problem with acid reflux.
