

Implantica Group – Brief Introduction

With over 10 years of extensive research and development work, with operations in the heart of Switzerland along with subsidiaries in the US and other countries, Implantica has been at the forefront of disrupting the field of smart medical implants and eHealth technologies with an initial focus on urology and digestive surgery.

Our vision is to become the world leader in Smart Medical Implants and eHealth technologies providing the best-in-class clinically effective solutions for patients.

We dare to claim that the results of our more than a decade of hard work and passion for developing breakthrough technologies that bring advanced technology into the body have brought us a long way on our path to fulfilling that vision.

Our ambition to make a noticeable contribution to mankind is already one step closer to becoming a reality with the introduction of our first breakthrough technology, RefluxStop™, a paradigm shift in the treatment of GERD (Gastroesophageal reflux disease) that affects more than 400 million people worldwide. RefluxStop has received CE mark and is now commercially available in key European countries and we hope to make it available in many additional markets in the near future.

We are convinced our medical implant solutions can support millions of patients with substantial unmet medical needs while at the same time offering a unique opportunity for healthcare systems to improve patient outcomes and save costs for the society-at-large.
